

B-TEK platform scales that utilize independent equipment

A White paper illustrating B-TEK Scales, LLC ability to create custom scale solutions for various industries

March 2010

Contributors: Eric Wolfe, Tracy McCracken

B-TEK Scales, LLC. is well known for their ability to accommodate custom scale requests. Scale technicians often lose billable time when stuck in the shop making additions or modification to a scale platform, unaware their unique needs can be met with a simple phone call to B-TEK Scales. B-TEK has the skill and experience required to properly add equipment or custom feature to a scale platform. The equipment can be supplied, installed and tested at the factory to insure proper function and a professional fit and finish. B-TEK engineers have the experience to solve some of the toughest requests. They have worked with so many industries, they can offer solutions that may not have been considered. Some great examples of factory installed equipment are illustrated in these photos. The gravity roller assembly and riser frame under the floor scale (figure 1) was designed to fit into an existing drum-fill conveyor line. The adjustable legs and ball transfer were assembled to a bench scale (figure 2), that will also fit into an existing conveyor line. In both cases, the equipment was factory supplied and installed to minimize a scale technician's shop assembly and field installation time. B-TEK Scales has over 95 combined years of scale experience to offer in support of your weighing equipment needs. B-TEK is your first choice in scale solutions. For more information on this or other B-TEK projects, please contact us at 1-800-266-8900.
